## **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Anthony Laurentano on 9/2/04.

The application has been amended as follows:

Amend claim 1 as follows:

## 1. (Currently Amended) A fuel cell stack comprising:

a plurality of unit fuel cells, each comprising an anode, a cathode, and an electrolyte which is placed between the anode and the cathode, wherein the unit fuel cells are stacked via separators; and

a pair of power output terminal plates, one attached to each end face of a unit comprising the stacked unit fuel cells, wherein:

at least one of a coolant passage or a gas passage is formed through the stacked unit fuel cells and the power output terminal plates in the stacking direction; and

an inner periphery of each passage through the power output terminal plates is covered with a grommet having an insulating capability.

Application/Control Number: 10/042,063

Art Unit: 1745

The following is an examiner's statement of reasons for allowance: the claims are directed toward a plurality of unit fuel cells, a pair of power output terminal plates, one attached to each end face of a unit comprising the stacked unit fuel cells, wherein at least one of a coolant passage or a gas passage is formed through the stacked unit fuel cells and the power output terminal plates in the stacking direction. An inner periphery of each passage through the power output terminal plates is covered with an insulating grommet.

Note the coolant passages have a supply passage where the coolant enters through one of the power output terminal plates and a drainage passage where the coolant exits through the other of the power output terminal plates.

Note the gas passages have a supply passage where the gas enters through one of the power output terminal plates and an exhaust passage where the gas exits through the other of the power output terminal plates.

The prior art does not teach the claimed invention. Kralick does not teach an inner periphery of each passage through the power output terminal plates is covered with an insulating grommet.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tracy Dove whose telephone number is 571-272-1285. The examiner can normally be reached on Monday-Thursday (9:00-7:30).

Art Unit: 1745

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pat Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
